Contents

- ❖ Introduction
- ❖ Objective of the project
- ❖ Tools and technologies used
- ❖ System design and architecture
- ❖ User interfaced futures
- ❖ Implementation
- ❖ Challenges faced
- ❖ Learning outcomes
- ❖ Conclusion
- ❖ Future scope

Introduction

- ▶ This Calculator project is a web-based application that enables users to perform arithmetic and scientific calculations through an interactive and visually appealing interface.
- ▶ It was developed to strengthen skills in HTML, CSS, and JavaScript while understanding UI/UX design, event handling, and functional programming.

Objective of the Project

- ▶ Understand client-side scripting through JavaScript.
- ▶ Implement advanced calculator functions like power, factorial, trigonometry, and square root.
- ▶ Enhance HTML/CSS skills for UI design.
- ▶ Build a responsive and usable calculator for educational or practical purposes.

Tools and Technologies Used

- ▶ Frontend: HTML5, CSS3
- ▶ Scripting: JavaScript
- ▶ IDE: Visual Studio Code
- ▶ Browser: Google Chrome

System Design and Architecture

- ▶ Flow: User clicks a button → input is displayed → script processes the expression → result is shown.
- ▶ Display Area: Shows current expression or result.
- ▶ Grid of Buttons: Digits, operators, and scientific functions.

User Interface Features

- ▶ Clean, modern calculator layout
- ▶ Button hover effects
- ▶ Highlighted equals and operation keys
- ▶ Responsive centered design

Implementation Details

1. Logic: JavaScript functions for evaluation, factorials, power, sin/cos/tan with degree conversion.
2. Event Handling: Buttons trigger JS functions like `appendToResult()`, `calculateResult()`, etc.
3. Code Highlights:
 - ▶ Expression parsing
 - ▶ Dynamic function calling (`Function(...)`)
 - ▶ Edge-case handling (e.g., divide by zero, overflow)

Challenges Faced

- ▶ Handling complex nested expressions
- ▶ Implementing power operator parsing ($\wedge \rightarrow \text{Math.pow}$)
- ▶ Converting angles from degrees to radians for trigonometry
- ▶ Overflow and input validation

Learning Outcomes

- ▶ Practical understanding of client-side development
- ▶ Mastery over DOM manipulation and inline event handling
- ▶ Enhanced debugging and logic structuring skills
- ▶ Clean UI/UX development using CSS

Conclusion

- ▶ This calculator project was a rich learning experience in full-stack frontend development.
- ▶ It enhanced both my programming logic and design skills.
- ▶ The final product is a feature-rich, user-friendly calculator.

Future Scope

- ▶ Add memory functions ($M+$, $M-$, MR)
- ▶ Implement history of calculations
- ▶ Support for dark/light theme toggle
- ▶ Mobile responsiveness with adaptive layout
